

Oracle & Champion

One Case. One Blind-Spot Review. One Decision Brief.

Bring a real AI-related decision. We examine what the current framing may be missing, which alternatives deserve attention, and what would need to be true to move forward.

An independent bounded trajectory field probe

Can capability developed through long-term human-AI collaboration remain useful for someone outside that original context? A paid external case tests usefulness, transfer, human supervision needs, and delivery effort. It does not assume the answer.

What you receive

Blind spot — An assumption, missing variable, or dependency worth examining.

Strategic options — Plausible alternatives and their tradeoffs.

Operating boundary — The conditions and evidence an option would require.

Next test — A concrete question, decision, or experiment to take forward.

Start with one case

US\$500 · One bounded case

For founders, leaders, and teams facing a decision involving AI capability, human judgment, operating models, or emerging product capability.

Scope and research boundary

This is not general consulting, implementation-for-hire, prediction, or professional legal, medical, regulatory, financial, or investment advice. Novelty, usefulness, and business outcomes are not guaranteed. Findings may support further testing, refinement, remaining bounded, pausing, or stopping.

Oracle & Champion is independent of EIP. It is not an EIP pilot, implementation, or validation program. Shared research interests do not make one project evidence for another.
