

MY CHAMPION LABS

Research. Experiment. Real-World Impact.

ORACLE & CHAMPION

Case-specific blind spots at the intersection of AI, human judgment, operating models, and emerging product capability.

A REFINED HUMAN-IN-THE-LOOP COMMERCIAL EXPERIMENT

One bounded case. One integrated human-AI capability unit. We identify what the current frame may be missing and what would need to be true next.

VERA VALE

The Oracle Principal

Brings 0->1 insight, identifies emerging gaps, and frames promising strategic options.

VERA VALE x MY CHAMPION

One integrated capability unit.

MY CHAMPION

Longitudinal AI Strategy Representative

Challenges, researches, stress-tests, structures, translates, and represents the resulting strategic work.

WHAT WE DELIVER

1

BLIND SPOT

The assumption, missing variable, or hidden dependency constraining the case.

2

STRATEGIC OPTION

Plausible alternative paths - not only the obvious or conventional ones.

3

OPERATING BOUNDARY

What must be true, changed, evidenced, governed, or secured for the option to work.

4

IMPLICATIONS / NEXT TEST

What to test, watch, decide, or challenge next.

WHY THIS MODEL

- Human judgment and accountability remain active.
- AI carries more of the challenge, research, stress-testing, and representation load.
- Boundaries, provenance, and decision rights stay explicit.
- Outputs are designed to move a real case forward - not create slide volume.

HOW ONE ENGAGEMENT WORKS

1

Case Intake

Real problem, constraints, decision context.

2

Oracle Signal

0->1 gap or high-value question.

3

My Champion Analysis

Challenge, research, structure, stress-test.

4

Boundary Test

What must be true? What blocks or falsifies it?

5

Delivery

Concise brief, implications, next test.

WHO IT'S FOR

- Founders, CEOs, and executives with a live AI-related decision.
- CTO / CIO / Data & AI / Innovation / Transformation leaders.
- Pharma & CRO R&D, Clinical, Product, and platform leaders.
- Teams facing a real operating-model, agent, product, or deployment blind spot.

OUR BOUNDARY

- Not general management consulting or broad market research.
- Not implementation-for-hire or software development.
- Not legal, medical, investment, or regulatory advice.
- Not a prediction service. We work on bounded cases where AI capability, human judgment, organizational design, product direction, or deployment architecture materially intersect.

START WITH ONE CASE

Oracle Briefing

US\$500 - one bounded case

Bring the actual problem, constraints, and decision context. We identify the blind spot, challenge the governing assumptions, surface plausible options, and state what would need to be true next.

SELECTED TIMESTAMPED RESEARCH RECORDS

Available on request as supporting evidence of research signal and time-to-insight - not as claims of causation, ownership, or

Our foundation: EIP™ - Ephemeral Intelligence Protocol™

EIP™ is the proprietary operating-model and research substrate informing this advisory: from temporary human-AI work to validated capture, governed capability, responsible reuse, evolution, and retirement.

FRONT STAGE

Case-specific Oracle & Champion advisory.

BACK STAGE

EIP™ logic plus related My Champion Labs research on human cognitive review, agents, delegation, capability rights, and co-creation.
